## POWAKADDY SPORT LITHIUM BRAKE GOLF TROLLEY

POWAKADDY

PowaKaddy Golf Trolleys
PowaKaddy Videos

The PowaKaddy Sport Lithium Brake golf trolley comes with the additional Electronic Braking System. In the EBS mode the EBS system produces a resistive force counteracting the pull from the trolley when travelling downhill giving you greater control. There are three levels of progressive braking for varying gradients. The PowaKaddy Sport Lithium Brake also features the simple to use ergonomic soft grip handle with a built-in responsive ambidextrous speed control roller combined with a fully integrated LCD display screen, and a separate Digital Distance Function (DDF) button allowing direct access to this feature.

The strong and lightweight material with a powerful yet whisper quiet 200 watt motor, PowaKaddy has developed an aesthetically pleasing but uncompromisingly robust, state-of-the-art electric trolley. A host of practical features come together to make the PowaKaddy Sport Lithium Brake one of the most complete trolleys on the market. It features a modern-looking white, black or graphite aluminium frame, a 3-way no-fuss folding mechanism, capable of fitting the trolley into the smallest of car boots; a battery-life monitor; digital clock; universal bag stay and soft grip pads suitable for all bag types.

As well as the Sport Lithium Brake option the new PowaKaddy Sport is available with top of the basic, lightweight Lithium battery, as well as 18 and 36 hole standard acid batteries.

## WHAT GOLFALOT SAYS

GOLFALOT
★★★★★

The PowaKaddy Sport Lithium Brake golf trolley uses the same tried and tested frame as previous PowaKaddy golf trolleys, which is perfect for whatever size of bag you have, even if it is a tour bag. The Sport Lithium Brake version comes with white wheels that look quite stylish and a choice of graphite or white frames.

The big difference is the handle and display controls, which are significantly better than the FWII model it replaces. The handle is narrower front to back and more sculpted to fit your hand and the re-introduction of the speed control roller makes it much easier to control the speed, whether you are left or right handed. It seems in our tests that the speeds are still set at 1-9 so you can't go at 3.5, just 3 or 4, but it is still much easier to use and the motor is very quiet.

The display has also been simplified and the distance measuring function, which was not very good and liable to get you disqualified in competitions that did not permit distance measuring devices, has thankfully gone. In its place is a clock, speedometer and battery charge indicator all of which give you the information you need in a clear way, even in bright light.

The lithium brake version of the PowaKaddy Sport comes with a lightweight low profile lithium battery that enables you to fold the trolley down with the battery in place, which saves space and time.

The EBS braking system is fantastic when you are going downhill as it slows the trolley down to whatever pace you need, even going to a negative speed to come to a stop on very steeps hills. Over and above that the usual great features such as the distance function to send the trolley 15, 30 or 45 yards or metres, frame folding locks, the bag lock and easy grip handles are all included.

We would have liked to have seen the adjustable front wheel clip from the PowaKaddy Touch rather than the adjustable bolt that requires a spanner, but that is about the only thing we can fault. The PowaKaddy Sport Lithium Brake is the daddy of golf trolleys and will be an excellent invesment for your game, whatever your level.
